

COVID-19

Vaccination

The CDC has made three vaccines available to the public. Moderna, Pfizer and Johnson & Johnson are all safe and have gone through all testing stages before being ready to use.

After receiving a vaccine, you may experience some side effects such as weakness, headache, and fever. These side effects are temporary and should go away after a few days. After you are fully vaccinated, we are one step closer to going back to a normal life.

All Marylanders age 16 and older can register to get vaccinated. Click [here](#) to pre-register for a vaccine appointment.
